RE: LEED IEQ Credit 4.4 Version 3

Dear Mr. Castonguay,

Hexion Inc. is the world's largest producer of binder, adhesive and coating resins for industrial applications. We are committed to using our resources and expertise in an effort to enhance our products and operations to improve their performance while minimizing environmental impact. Hexion products enable numerous sustaining technologies such as windmills for wind energy, use of wood-waste into engineered wood and composite products, and low-weight composites for increased fuel efficiency. Our scientists continue to explore new innovations, such as using bio-based raw materials, water-borne systems and ambient curing materials. Operationally, we continue to strive for reductions in energy use, water and other inputs while minimizing emissions and environmental impact.

The purpose of this letter is to confirm that adhesive systems (products detailed below) currently supplied by Hexion Inc., do not contain urea-formaldehyde polymer that would disqualify it for the credit described as IEQ Credit 4.4 for Low-Emitting Materials - Composite Wood and Agrifiber Products in LEED-NC, Version 3, published by the US Green Building Council.

As always, Hexion Inc. appreciates your interest in our products. If we can be of further assistance in this or any other matter, please do not hesitate to contact us.

Regards,

A handwritten signature in black ink, appearing to be 'SL', with a long horizontal line extending to the right.

Sydney Lindquist
